Creative Biogene's top priorities are to streamline the platform processes or work with you to design a process that meets your specific needs and expedites your transition to the clinic. With years of experience in plasmid DNA production, Creative Biogene can offer the most affordable and high-quality GMP grade plasmid DNA production service to meet your various needs.Plasmids were identified initially as elements carrying extrachromosomal genetic information of Escherichia coli (E. coli) [1]. Nowadays, these typically circular DNA molecules have become one of the most important tools in genetics and molecular biology. With the development of gene therapy and genetic vaccination, plasmid DNAs with high quality and high purity are needed. During a period of development, Creative Biogene can provide you with GMP grade plasmid DNA to best matches your needs, such as animal experiments, microinjection, and gene therapy studies. Besides, with the help of highly experienced staffs, Creative Biogene can provide the fastest turnaround time of any supplier in the industry.Application:Gene therapyDNA vaccines researchBiodistribution studiesBioprocess manufacturing applicationsFeature:Flexible production scale from micrograms to gramsNo animal derived enzymes or organic solventsHigh proportion of supercoiled DNAStrict quality controlCompetitive pricesFast turnaround timeCreative Biogene offers GMP grade plasmid DNA production services for your scientific research as follows:Selection of host strain and growth conditions.High-cell-density fermentation and harvesting.Cell lysis and plasmid purification.Quality control testing.FAQ: GMP grade plasmid DNA Production ServiceReference:Lederberg J.
